INTRODUCTION

This supplement to the Occupant Attitude Survey for Military Family Housing: Oahu Consolidated Family Housing Office (OCFHO), 1985 contains tables of specific descriptive statistical information. Frequencies for all items on the questionnaire, as well as select demographics cross-tabulated with all other items, are presented. For an interpretation of these tables, see the final report (TR 86-).

FREQUENCY TABLES

Reading the Table

Frequency tables present the actual number of respondents in each category ("Absolute Frequency") and this number as a series of percentages of the entire sample. These percentages are displayed as: relative frequencies, which are the percentages based upon the entire sample, including those not responding to that particular item (code number 999); adjusted frequencies, or the percentages of those responding to that item; and the cumulative percentage, which is the summation of the adjusted frequencies.

For example, looking at Question 6, we see that 147 respondents strongly agreed with the item. This number represents 3.9 percent of the total number of respondents to the questionnaire as a whole, and 4.1 percent of those responding to Question 6. When these responses are added to the other response categories appearing above it, the sum is 100 percent.

Frequencies

Q1: SERVICE

19 ABSTRACT (Continue on reverse if necessary and identify by block number)				
<p>→ Army, Navy, Air Force, and Marine Corps personnel assigned in Hawaii and living in military family housing were surveyed for their opinions and attitudes about their housing and support facilities and services. Topics covered included: General Satisfaction and Perceived Living Conditions; Policies, Procedures, and Operations; Facilities; Maintenance; Services and Self-help; Security; Communications; and Housing Referral and Temporary Lodging Allowance (TLA). Results showed that 68 percent of the service members were generally satisfied with their present housing unit. Problems were identified with some housing office procedures, with rule enforcement, maintenance delays and nonresponse, pesticide spraying, and quarters security. Respondents were generally satisfied with most aspects of self-help, housing referral, and TLA that were measured.</p> <p>←</p>

CROSS-TABULATION TABLES

Reading the Table

Below is a sample cross-tabulation table. For each cell within a table, four pieces of information are presented: the actual number or count (N) who chose that response category, the row percentage, the column percentage, and the percentage of the total. Outside the table are the marginals (i.e., the aggregated N, and the overall row and column percentages). It is extremely important that the percentages be interpreted correctly within the appropriate subgroup or across subgroups.

Q144: RESIDENTS SHOULD DO THEIR OWN SECURITY INSPECTIONS

		COUNT						ROW	
		ROW PCT	COL PCT	STRONGLY	DISAGREE	NEITHER	AGREE	STRONGLY	TOTAL
		TOT PCT	DISAGREE	DISAGREE	NEITHER	AGREE	AGREE	AGREE	
ON-BEFORE OCT 83		232	452	361	536	175	1756		
		13.2	25.7	20.6	30.5	10.0	47.4		
		48.3	45.7	47.0	47.2	53.4			
		6.3	12.2	9.8	14.5	4.7			
AFTER OCT 83		248	538	407	600	153	1946		
		12.7	27.6	20.9	30.8	7.9	52.6		
		51.7	54.3	53.0	52.8	46.6			
		6.7	14.5	11.0	16.2	4.1			
COLUMN		480	990	768	1136	328	3702		
TOTAL		13.0	26.7	20.7	30.7	8.9	100.0		

1. Interpreting the marginals.

The numbers appearing on the right side of the table show the numbers and percentages of the respondents who were included in each demographic category. For example, 1756 individuals who responded to Question 144 were assigned housing on or before October 1983. These individuals represented 47.4 percent of the total number (3702 at the bottom of the table) who responded to the question.

The figures at the bottom of a column show the number and percentage of respondents who chose that response alternative (i.e., 480 people, 13% of the total, strongly disagreed that residents should do their own security inspection).

2. Interpreting the data of a single cell.

To determine whether the demographic data have a differential effect upon the respondents' answer to the question, you must examine the numbers in each cell of the table. The first number in the cell represents the total number of responses for that row and column label. For example, 232 respondents who strongly disagreed with Question 144 were assigned housing by October 1983.

The second number within the cell is the row percentage. This number represents a comparison across the rows (i.e., 13.2% of those assigned housing by October 1983) strongly disagreed with residents doing their own security inspections (232 of the 1756 total).

Column percentages are comparable, the difference being that a vertical comparison is being made. For example, 48.3 percent of those who strongly disagreed with Question 144 were assigned housing by October 1983 (or 232 of the 480 total).

The remaining percentage that appears in each cell is a comparison of the number of respondents in that cell block with the total responding to the question. For example, those who strongly disagreed with the residents doing their own security inspections, and who also were assigned housing by October 1983, represent 6.3 percent of the total respondents to Question 144 (232 of the 3702 total).
